SUMMARY

Highly motivated Data Analytics Specialist with over 3 years of experience specializing in cloud services, data engineering, Power BI, and advanced analytics. Proven track record in building data pipelines, automating reporting processes, and deriving actionable insights that enhance business performance. Skilled in leveraging the latest technologies in machine learning, cloud computing, and data visualization to drive efficiency and support informed decision-making for stakeholders.

SKILLS

Programming Languages: Python, R, SQL (MySQL, PostgreSQL, MS SQL Server), MATLAB, JavaScript, SAS, HTML
Machine Learning: Scikit-Learn, TensorFlow, Keras, PyTorch, XGBoost, LightGBM, LSTM, ARIMA, Random Forest, Gradient Boosting, K-Means, PCA, Decision Trees, SVM, Clustering, Deep Learning, Natural Language Processing (NLP), Anomaly Detection
Cloud & Big Data Technologies: AWS (S3, Redshift, Lambda, SageMaker), Google Cloud Platform (BigQuery, Vertex AI), Apache Spark, Hadoop, PySpark, Docker, Kubernetes, AWS Glue, AWS EMR
Data Engineering & Visualization: Power BI (DAX, Power Query), Tableau, Pandas, NumPy, Matplotlib, Seaborn, Plotly, SQL (ETL Processes, Data Modeling), Apache Kafka, R Shiny, Spotfire, Excel (VBA), Quarto, Data Warehousing, Data Pipeline Design
Database & Data Warehousing: PostgreSQL, MS SQL Server, MySQL, NoSQL (MongoDB, Cassandra), Google BigQuery, Redshift
Data Science & Advanced Analytics: Time Series Analysis, NLP (Text Mining, Sentiment Analysis), A/B Testing, Propensity Score Matching, Survival Analysis, Statistical Testing, Experimental Design, Monte Carlo Simulation, Optimization, Hypothesis Testing
Software Development & Tools: Git, JIRA, CI/CD, Jenkins, Agile Methodologies, GitHub, Streamlit, API Development, Docker, DevOps, Real-Time Data Processing
Business Analytics: Market Research, Business Intelligence, Predictive Modeling, Data-Driven Decision Making, Business Process Optimization

WORK EXPERIENCE

Data Analytics Specialist, *SRS Electronics*, *India* — January 2020 - January 2023

- Automated Power BI dashboards using Python, integrating DAX for advanced calculations and custom visualizations, enabling stakeholders to make real-time data-driven decisions, significantly improving reporting efficiency and insight accessibility.
- Designed and implemented optimized data pipelines using AWS services (S3, Lambda, Redshift), improving data storage, processing speed, and retrieval efficiency, reducing processing time by 40%.
- Created and maintained robust ETL processes with SQL, PostgreSQL, and Microsoft SQL Server, ensuring seamless integration and consistency across business-critical data systems, enhancing data integrity and workflow reliability.
- Utilized advanced machine learning techniques in Python (Scikit-Learn, Pandas) to develop predictive models, driving actionable insights and a 15% improvement in customer satisfaction through better-targeted strategies.
- Developed and published interactive Power BI reports and dashboards, presenting advanced visualizations and key performance indicators (KPIs) that supported strategic decision-making, enhancing overall business performance and operational transparency.
- Collaborated with cross-functional teams, translating business requirements into scalable data-driven solutions and building predictive models that directly addressed key organizational challenges, driving operational efficiency.
- Conducted comprehensive data cleaning, transformation, and analysis using Pandas and SQL, improving data accuracy and ensuring the final datasets provided reliable business insights for better decision-making.
- Delivered ad hoc analytics and custom reports, applying statistical analysis (e.g., regression, hypothesis testing) to identify trends and anomalies, leading to operational improvements and a 10% increase in sales performance.

PROJECTS

Healthcare Outcome Prediction (Python, Logistic Regression, Random Forest, Matplotlib, Seaborn) — April 2024
Developed predictive models to forecast patient recovery from a dataset of over 500,000 records. Enhanced accuracy through advanced preprocessing and visualized outcomes using Matplotlib and Seaborn.

E-commerce Customer Behavior Analysis (Apache Hadoop, Apache Spark, PySpark, Kafka, Power BI) — March 2024
Processed 100 million interactions with Hadoop and Spark, improving processing time by 40%. Analyzed transactions with PySpark, created a real-time data pipeline using Kafka, and built a Power BI dashboard, increasing marketing effectiveness by 20%.

Financial Market Predictive Modeling (ARIMA, LSTM, Gradient Boosting, Kafka, Power BI) — November 2023
Built ARIMA, LSTM, and Gradient Boosting models on 10 years of data to improve prediction accuracy by 25%. Implemented a Kafka pipeline for real-time data processing and created a Power BI dashboard, boosting portfolio performance by 18%.

***Music & Mental Health* Analysis** (Python, K-Means, Hierarchical Clustering, PCA) — October 2023
Analyzed music preferences of 50,000+ individuals using K-Means and Hierarchical Clustering, reducing dataset complexity with PCA. Identified key trends linking music preferences with mental well-being.

EDUCATION

University at Buffalo, The State University of New York
Master's in Data Science — June 2024
Course Work: Data Intensive Computing, Statistical Analysis, Machine Learning, Data Visualization.
